

ABSTRACT OF THE DISCLOSURE

A financial processing system that accesses account, event and organization attributes from a relational database management database, wherein: (1) the account attributes comprise data about accounts being measured, (2) the event attributes comprise data about account-related transactions, and (3) the organization attributes comprise data about the organization's financial status. Profitability calculations are performed in the computer using the account, event and organization attributes accessed from the relational database management system, as well as one or more profit factors and one or more rules.

5 The profitability calculations comprise the following:

$$\begin{aligned} 10 \quad \text{Profit } (a_i) &= \text{Net Interest Revenue (NIR)} (a_i) \\ &+ \text{Other Revenue (OR)} (a_i) \\ &- \text{Direct Expense (DE)} (a_i) \\ &- \text{Indirect Expense (IE)} (a_i) \\ &- \text{Risk Provision (RP)} (a_i) \end{aligned}$$

15 for an account a_i .

Thereafter, one or more earnings calculations are performed in the computer using results from the profitability calculations and tax adjustment attributes accessed from the database. The earnings calculations comprise the following:

$$\text{Earnings } (a_i) = \text{Profit } (a_i) * (1 - \text{Effective Tax Rate})$$

20 for the account a_i . In these earnings calculations, the Effective Tax Rate comprises the following:

$$\text{Effective Tax Rate} = (1 - \text{tax rate}_2) * (\text{tax rate}_1) + \text{tax rate}_2$$

The tax rate₁ and tax rate₂ are effective rates, wherein tax rate₂ is deducted from income, and tax rate₁ is not deducted from income. In one embodiment, tax rate₁ is a federal income tax rate and tax rate₂ is a state income tax rate.

25

Finally, one or more total earnings calculations are performed in the computer using results from the earnings calculations. The total earnings calculations comprise the following:

$$\text{Total Earnings} = \sum_i [\text{Earnings } (a_i)]$$

for all accounts a_i .
